

Q CAN I USE 360 UNDERCOVER ON THE SECONDARY AND TERTIARY BOOMS?

Generally, 360 UNDERCOVER is used in conjunction with the same SMP mounting system used on 360 Y-DROP and that is confined to the first break in the boom – typically 60'. This allows for normal spraying and folding operations without removal of the risers.

Q CAN I USE 360 UNDERCOVER FOR WEED CONTROL?

Yes. Many users use the nozzle body assembly for in-row application of herbicides. By flipping the 360 UNDERCOVER body over, the nozzles are directed down to the ground.

Q CAN I USE 360 UNDERCOVER AND 360 Y-DROP AT THE SAME TIME?

If the applicator is equipped with dual tanks and pumps, both 360 UNDERCOVER and 360 Y-DROP can be used at the same time.

Q I SPRAY AT AN ANGLE TO THE ROW. CAN I USE 360 UNDERCOVER?

360 UNDERCOVER is designed to operate in the crop canopy. To navigate through the crop, it is necessary to run in the same direction as the row. Running at an angle would likely trip the breakaways and reduce effectiveness.

Q SHOULD I USE THE OVER-THE-TOP BOOM TOO? OR JUST APPLY PRODUCT WITH THE 360 UNDERCOVER?

It depends on the pest targeted and products being used, but our tests show the best plant coverage when one nozzle is used on the wet boom and three nozzles are used on 360 UNDERCOVER.

Q WHAT NOZZLES ARE RECOMMENDED?

The 360 UNDERCOVER nozzle body accommodates all types of standard nozzles. The right nozzle depends on the product, rate and pest being targeted. We have a nozzle selection guide that can provide specific recommendations for each application.
